. Users need to select and download an application and then start and stop it using the GUI. Roclink V-E technology offers the advantage of having all the software integrated. Roclink 800 package is available in an application form and the best approach is to. Download Roclink 800 Package ROCLINK. The ROCLINK User Guide is located on the ROCLINK web site. Roclink V-E technology offers the advantage of having all the software integrated. Roclink 800 package is available in an application form and the best approach is to.1. Field of the Invention The present invention relates to a multi-view image display apparatus and, more particularly, to a method and apparatus for obtaining multi-view images using a plurality of images obtained by a plurality of cameras. 2. Description of the Related Art In recent years, with the development of various multimedia technologies, a stereoscopic image display apparatus capable of displaying 3-dimensional (3D) images has been developed and widely used for the entertainment market. In the stereoscopic image display apparatus, a left-eye image and a right-eye image for a user are displayed on the user's left and right eyes respectively. Thus, the user is allowed to have a 3D effect, such as a depth sensation or perspective sensation. The stereoscopic image display apparatus may be classified into an auto stereoscopic method and a non-auto stereoscopic method. In the auto stereoscopic method, the stereoscopic image display apparatus alternately displays the left-eye image and the right-eye image, such that the images are displayed for the user's left and right eyes, respectively, to allow the user to recognize a stereoscopic image without changing the positions of his/her eyes. On the other hand, in the non-auto stereoscopic method, a left-eye image and a right-eye image are alternately displayed at a constant time interval, such that the left-eye image is displayed for a first period and the right-eye image is displayed for a second period. Then, after the display of the right-eye image is finished, the left-eye image is displayed for a time period corresponding to that of the right-eye image displayed in the second period, thereby allowing the user to recognize the stereoscopic image. Such a non-auto stereoscopic method has an advantage in that the 3D image may be continuously displayed. As an example of a display apparatus using the non-auto stereoscopic method,
